

School Feeding Program Model for minimum PPE

Drive-up Site:

Concept is that vehicles approach and come to a stop at the first station. Station is equipped with at least a six foot table for safe distancing and signs that say:

“stop”

“Please keep your windows up”

and asks “how many students are you picking up for?”

Worker six feet away from the vehicle relays the information to station two. Station two workers places the number of meals on at least a six foot table and steps away. Tables are placed on either side in case there is no passengers available to retrieve the meals. Vehicle is waived forward to the tables where they then stop, roll down their windows, touch and grab only their meals, and then roll up their windows and drive away. And the process is repeated. No PPE is necessary and the tables only need to be wiped down periodically or after being touched by someone in the vehicle.
